

Bhimpur Swarniji Vidyapith (H.S)

Activity task - 2020

Class - IX

Subj: Physical Science.

1. $3x + 2y = 12$ and $2x + 3y = 13$ solve for x and y.

2. A person starts from a point A and goes to point B. The distance between A and B is 100 km. He starts at 8:00 AM and reaches B at 12:00 PM. Find his speed.

3. A person starts from a point A and goes to point B. The distance between A and B is 100 km. He starts at 8:00 AM and reaches B at 12:00 PM. Find his speed.

4. $2x + 3y = 12$ and $3x + 2y = 13$ solve for x and y.

5. A person starts from a point A and goes to point B. The distance between A and B is 100 km. He starts at 8:00 AM and reaches B at 12:00 PM. Find his speed.

6. A person starts from a point A and goes to point B. The distance between A and B is 100 km. He starts at 8:00 AM and reaches B at 12:00 PM. Find his speed.

7. A person starts from a point A and goes to point B. The distance between A and B is 100 km. He starts at 8:00 AM and reaches B at 12:00 PM. Find his speed.

8. A person starts from a point A and goes to point B. The distance between A and B is 100 km. He starts at 8:00 AM and reaches B at 12:00 PM. Find his speed.

9. A person starts from a point A and goes to point B. The distance between A and B is 100 km. He starts at 8:00 AM and reaches B at 12:00 PM. Find his speed.

10. $3x + 2y = 12$ and $2x + 3y = 13$ solve for x and y.

11. A person starts from a point A and goes to point B. The distance between A and B is 100 km. He starts at 8:00 AM and reaches B at 12:00 PM. Find his speed.
