**SUBINOY BISWAS, MP EXAMINEE-2020(BHIMPUR SWAMIJI VIDYAPITH)**

Bhimpur, 26th April, 2020: The SARS-COV-2 which was originally originated in China, and spread all over the world in months and possessed the risk of a upcoming pandemic of the century. Nobody was certain that this virus from the corona virus family would cause this amount of harm. At first nobody even knew about this virus formerly called the COVID-19. This caused serious amount of casualties in Wuhan China. After the World Health Organization declared this situation as a pandemic. The Indian government took various actions to resist this situation. The Indian Government at first declared a Janata Curfew for one day experimentally. After this complete lockdown was announced (imposed) in India. This caused a serious amount of worry among people which can be seen in people rushing to get necessary groceries. Even though Government was clear about essential services would remain open, no one cared. The economical growth fell enormously as the businesses faced great amount of loss due to lockdown. Not only in our country, the global economy faced a huge drop. Not only the huge corporate sectors faced loss. Our daily lives are also crippled. Due to lockdown we are very restricted inside our house. This becomes worse for the homeless people. Even if there are shelters, not many people are sheltered there. The small business owners' suffering is one of the most as their items they stocked can't be sold and they will not be usable after. While staying at home is safe, it's not free. Many people earn from day to day jobs(works)[wage labourers] and they can't meet their expenses. This is a huge problem. While the Government has tried to solve this with giving the workers ,who lost their jobs, compensation, it's not enough and also there is corruption in the system .So they are not getting the promised amount. For now the self isolation and lockdown seem to stay and there is close to zero promise of solving this huge problem.(340- Words)
